## Введение.

Въ этомъ выпускѣ II части Лѣтописей напечатаны полностью наблюденія въ 3 срока, произведенныя въ 1904 г. на 74 станціяхъ 2-го разряда изъ числа тѣхъ, для которыхъ даны ежемѣсячные и годовые выводы въ 1-омъ выпускѣ. По экономическимъ соображеніямъ число станцій, вошедшихъ въ этотъ выпускъ, сокращено сравнительно съ соотвѣствующимъ отдѣломъ Лѣтописей за 1903 г. на 5 пунктовъ. Станціи Иркутской сѣти (Красноярскъ, Верхоянскъ, Киренскъ, Иркутскъ, Чита, Нерчинскій заводъ, Троицкосавскъ), наблюденія которыхъ предполагаютъ напечатать въ особомъ изданіи, замѣнены нѣкоторыми станціями Екатеринбургской сѣти (Верезовъ, Зайсанъ, Уркачъ). По причинѣ недостаточной полноты наблюденій за 1904 г., вмѣсто наблюденій Богословска, Влоцлавска, Саратова и Рыковского напечатаны наблюденія станцій: Усть-Сысольскъ, Бѣлая Криница, Пады и Николаевскъ на Амурѣ.

Наблюденія 10 станцій при опытныхъ лѣсничествахъ напечатаны на средства Лѣсного Департамента Главнаго Управленія Землеустройства и Земледѣлія.

Какъ обрабатывались печатаемыя здѣсь наблюденія, изложено въ введеніи къ 1-ому выпуску II части Лѣтописей; въ томъ же выпускѣ можно найти — въ „замѣчаніяхъ объ отдѣльныхъ станціяхъ“ и въ „обозрѣніи станцій“ — свѣдѣнія объ инструментахъ, служившихъ для наблюденій, ихъ установкѣ, а также о положеніи станцій.

Чтобы облегчить пользованіе этимъ выпускомъ Лѣтописей, приводимъ здѣсь краткія объясненія къ таблицамъ.

Въ таблицахъ этого выпуска, какъ вездѣ въ Лѣтописяхъ, счетъ времени принятъ по **новому стилю**.

Показанія **барометровъ**, приведенныя къ 0° и къ нормальной тяжести, т. е. къ силѣ тяжести подъ 45° широты на уровнѣ моря, выражены въ **миллиметрахъ**; **температура** выражена въ **градусахъ Цельзія**, при чемъ показанія термометровъ приведены къ **международной температурной шкалѣ** (къ стоградусному водородному термометру); **абсолютная влажность** выражена въ **миллиметрахъ**, **относительная влажность** — въ **процентахъ насыщенія**, при чемъ для краткости взамѣнъ 100 поставлено 00. Для обозначенія **облачности** принято 10 степеней, при чемъ 10 обозначаетъ небо, вполне покрытое облаками; приставленные въ нѣкоторыхъ случаяхъ къ этимъ числамъ показатели 0 и 2 обозначаютъ, что облака были очень тонки (0) или очень густы (2). **Скорость вѣтра** выражена **числомъ метровъ въ секунду**, а количества выпавшихъ **осадковъ** даны въ **миллиметрахъ**.

**Направленіе вѣтра**, согласно съ постановленіями международного метеорологическаго съѣзда, обозначено слѣдующимъ образомъ:

N — отъ сѣвера,	S — отъ юга,
W — отъ запада,	E — отъ востока.

Если скорость вѣтра была менѣе 1 метра въ секунду, то въ таблицахъ не показано направленіе вѣтра, а поставлена только отмѣтка 0, означающая **штиль**.

Въ графѣ „примѣчаній“ принято слѣдующее обозначеніе для различныхъ явленій, также согласное съ международными постановленіями:

● = дождь,	☙ = сильный вѣтеръ,
* = снѣгъ,	⚡ = гроза (близкая),
△ = крупа,	⚡ = отдаленная гроза (отдаленный громъ),
▲ = градъ,	⚡ = молнія безъ грома или зарница,
≡ = туманъ,	☼ = сѣверное сіяніе,
≡ = поземный туманъ,	☾ = радуга,
ρ = роса,	☉ = кругъ около солнца,
□ = иней,	☉ = вѣнецъ около солнца,
∇ = изморозь,	☉ = столбы около солнца,
S = гололедица,	☾ = кругъ около луны,
← = ледяныя иглы,	☾ = вѣнецъ около луны,
✚ = метель,	∞ = сухой туманъ.

Приставленные къ этимъ знакамъ показатели 0 и 2 обозначаютъ, что отмѣченное явленіе было очень слабо (0) или очень сильно (2).

Числа, поставленные послѣ этихъ знаковъ, и сокращенія: n (nocte), a (ante), p (post) означаютъ:

n — между 9 ч. вечера и 7 ч. утра,  
a — между 7 ч. утра и 1 ч. пополудни,  
p — между 1 ч. пополудни и 9 ч. вечера,

1 — во время 1-го наблюденія (7 ч. утра),  
2 — во время 2-го наблюденія (1 ч. пополудни),  
3 — во время 3-го наблюденія (9 ч. вечера).

Наблюденія вообще дѣлались въ 7 ч. утра, 1 ч. и 9 ч. пополудни, какъ и обозначено въ заголовкахъ таблицъ. Отдѣльныя наблюденія, произведенныя не въ обычные сроки, а раньше или позже (но не болѣе одного часа), отмѣчены курсивнымъ шрифтомъ.

Осадки измѣряются въ 7 ч. утра, а измѣренное количество, согласно постановленія международного съѣзда метеорологовъ, записывается на предыдущій день.

Сомнительныя, а также интерполированныя данныя напечатаны курсивомъ.

Директоръ Николаевской Главной Физической Обсерваторіи, Академикъ *М. Рыкаевъ*.

Маріупольское лѣсничество.  
Станція № 5, въ лѣсу.

Мартъ. — Mars.

Marionpolskoe, verderie.  
Station № 5, dans la forêt.

Число. — Dat.	Барометръ. Pression.			Температура воздуха. Température de l'air.					Абсол. влажн. Tension de la vapeur.			Отн. влажн. Humidité relative.			Облачн. Nébulosité.			Направление и скорость вѣтра. Direction et vitesse du vent.			Осадки. Précipitat.	Примѣчанія. Remarques.
